PRODUCT DESCRIPTION

Designer: Neil Poulton

Rea by Artemide

As if a reflection of itself, the Rea light was also described by Neil Poulton as a splitting amoeba. A true Trekkie, Poulton was inspired by the Starship Enterprise from the 1960s TV series. A small and minimalist design, the Rea light casts light upwards and onto the wall. Available in two sizes, Rea 12 and Rea 17, both small and discreet. One disk houses the integrated LED source while the perpendicular disk functions as a wall support. The two disks are at a 90 angle but harmoniously blend into each other. Rea is suitable for both residential and commercial projects, and will match with any interior design. Ideal for hallways, bedrooms, living rooms, waiting and sitting areas.
